

CLAIMS

1. An intra-radicular post, for rebuilding of teeth, with treatment of passages, comprising an apical portion, a body adjacent to the apical portion, and a head adjacent to the body; characterized in that the body is tapered with a higher diameter near to the head and a lower diameter near to the apical portion and further comprising a plurality of conical segments.
2. An intra-radicular post for rebuilding of teeth, with treatment of passages, according to claim 1, whereupon the post body has a taper of between 0.03 and 0.07 mm/mm.
3. An intra-radicular post for rebuilding of teeth, with treatment of passages, according to claim 2, whereupon the post body has a taper of 0.04 mm/mm.
4. An intra-radicular post for rebuilding of teeth, with treatment of passages, according to claim 3, whereupon the post body has a taper of 0.06 mm/mm.
5. An intra-radicular post for rebuilding of teeth, with treatment of passages, according to claim 3, wherein the conical body comprises seven conical segments.
6. An intra-radicular post for rebuilding of teeth, with treatment of passages, according to claim 1, whereupon each segment of the post has an approximate height of 1 mm.
7. An intra-radicular post, for rebuilding of teeth, with treatment of passages, comprising an apical portion, a body adjacent to the apical portion, and a head adjacent to the body; characterized in that the

apical portion comprises a plurality of cylindrical segments with a flat end.

- 5 8. An intra-radicular post for rebuilding of teeth, with treatment of passages, according to claim 7, wherein the apical portion comprises three cylindrical segments.
- 10 9. An intra-radicular post, for rebuilding of teeth, with treatment of passages, comprising an apical portion, a body adjacent to the apical portion, and a head adjacent to the body; characterized in that the head comprises a plurality of conical segments and at least a lateral flat face.
- 15 10. An intra-radicular post for rebuilding of teeth, with treatment of passages, according to claim 9, wherein the head comprises four conical segments.
- 20 11. An intra-radicular post for rebuilding of teeth, with treatment of passages, according to claim 9, wherein the head comprises two lateral flat faces.
- 25 12. An intra-radicular post, for rebuilding of teeth, with treatment of passages, comprising an apical portion, a body adjacent to the apical portion, and a head adjacent to the body; characterized in that the post height can be modified by making up to two cuts in the apical portion and/or up to three cuts in the post head.
- 30 13. An intra-radicular post of adjustable dimensions for rebuilding of teeth, with treatment of passages, according to claim 12, wherein the height adjustment consists in cutting one, two or three conical segments from the head.

14. An intra-radicular post of adjustable dimensions, for rebuilding of teeth, with treatment of passages, according to claim 12, whereupon the height adjustment consists in cutting one or two cylindrical segments of the apical portion.
